

CerviTrac™ Pillow

Multi-channel Support Pillow

- Helps relieve neck tension and aching stiff necks.
- Recessed center cradles your head for a better night's sleep.
- Supports your neck in its natural position.
- Fiber channels limit fiber migration so your pillow lasts longer.

Proper Sleeping Support

The CerviTrac Pillow's multi-channel design was engineered to allow you to choose the support level needed and limit fiber migration. This design helps relieve spasms, alleviate minor tensions and maintain or resume the natural cervical curve of your neck while at rest.

Why the Recessed Center?

The recessed center provides maximum comfort and flexibility. When sleeping on your back, the center cradles your head to support your neck in its most natural position. As you roll from your back to one side, the raised side channels provide the proper support to gently hold your neck in a comfortable position.

Natural Pain Reliever

By supporting your head and neck in a proper sleeping posture, The CerviTrac Pillow can help relieve pain from neck injuries and prevent airway blockage (a major cause of snoring). Most people experience an increase in sleeping comfort within a couple of days. Others may require up to two weeks before the neck and back muscles adjust to their proper position.

CerviTrac Support Pillow

Instructions:

Use as directed by your doctor. Place this pillow in a pillowcase. For back sleeping, start by using the smaller channel. After several weeks, turn the pillow around and use the larger channel, if needed. For side sleeping, use the side channels.

Helps Relieve:

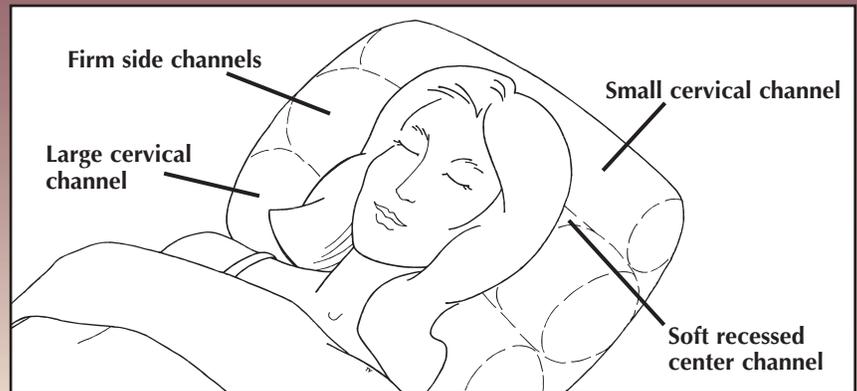

- Tension headaches
- Neck muscle and joint sprains and strains
- Ligament sprains
- Whiplash injuries
- Arthritis and rheumatoid arthritis

Back Sleeping:

- Supports your neck in its natural position.
- Provides support from smaller channel, extra support from larger channel.

Side Sleeping:

- Provides side sleeping comfort from either side channel.

Gives Proper Sleeping Support Supports Your Neck in its Natural Position

The recessed center of this pillow cradles your head to provide the maximum support for your neck. The five fiber channels allow you to choose the support level you need and limit fiber migration, making this a long-lasting and popular pillow. This design helps relieve spasms, alleviate minor tensions and maintain or resume the natural cervical curve of your neck while at rest.

Most people experience an increase in sleeping comfort within a couple days. Others, however, may require up to two weeks before the neck and back muscles adjust to their proper position.

Why the recessed center?

The recessed center provides maximum comfort and flexibility. When sleeping on your back, the center cradles your head to support your neck in its most natural position. As you roll from your back to one side, the raised side channels provide the proper support to gently hold your neck in a comfortable position. As you roll to your back, the center lets your head nestle for the greatest comfort and appropriate support.
